

# An introduction to MJCA

Since the early 1980s, MJCA has provided independent advice on environmental issues to the public and private sectors. Over this period, environmental management has changed significantly as our understanding of the environment steadily develops, standards tighten and new legislation is introduced. To keep ahead of this scientific, technological and legislative change we review continually and develop our services, to ensure that our clients receive advice which satisfies both best practice and current and future demands. Our proven environmental and operational experience, high technical standards and commercial awareness enable us to provide practical, cost effective advice and solutions.

## Services include:

- Water management
- Planning and environmental assessment
- Surveying and computer aided design
- Geotechnical and civil engineering services
- Landscape and ecology
- Atmospheric emissions
- Waste management solutions
- Mineral development
- Landfill design and management
- Contaminated land
- QA of low permeability barrier systems
- Corporate environmental issues
